DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-12, drawn to a pixel structure device, classified in class 349, subclass 38.
 - II. Claims 13-25, drawn to a method of making a pixel structure device, classified in class 349, subclass 187.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the device can be made by another and materially different process, for instance without forming the active element, the scan line, and the data line in this sequence.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Art Unit: 2871

4. This application contains claims directed to the following patentably distinct species of the claimed invention:

Choose one of each pair:

A1. A polysilicon TFT [see Figs. 2, 3, 5, and 6; cf. claims 2-5 and 15-20].

A2. A amorphous silicon TFT [see Fig. 4; cf. claims 10, 11, 21, and 22].

B1. The pixel electrode coupled to the active element through a conductive layer [see Figs. 2, 4, and 5; cf. claims 3 and 16].

B2. The pixel electrode coupled directly to the active electrode [see Figs. 3 and 6; cf. claims 4, 5, 17, and 18].

C1. The active element is directly coupled to the capacitor electrode or the transparent capacitor electrode [see Fig. 5; cf. claim 7].

C2. The active element is coupled to the capacitor electrode or transparent capacitor electrode through the pixel electrode [see Fig. 6; cf. claim 8].

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, the claims not referred to above are believed to be generic with respect to each species.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
